

SPORTIVE SUSPENSION

THE MOST PROFITABLE SOLUTION

Powerful...

The powerful MAD Sportive Lowering Springs lower the profile of your car and improve the road ability significantly. At higher speeds the car will have a better grip to the road surface and will provide a sportive and dynamic driving sensation with tight curving.

The lowering of your car creates a complete new look. No longer a standard product from the factory, your car will transform into a remarkable and appealing ride. The innovative design of MAD lowering springs guarantee the best comfort in lowering springs. Due to their progressive characteristics the springs will maintain their form and functionality, even in the toughest of circumstances.

- lifetime guarantee on the springs
- lowering range 25-60 mm
- improved cornering and stability
- complies with ISO and TÜV requirements
- conservation of comfort through use of progressive springs

The best quality

Only the best quality will do for your car! We couldn't agree more, so we place the highest demands on our development process, the materials we use and the production process. MAD Sportive is ISO 9001 certified while the Lowering Springs have been approved by both TÜV and RDW.

Control ...

Fast steering action, amazing road ability and great looks for your car...still you are looking for more. You are looking for comfort to go hand in hand with performance. You are looking for MAD sportive Sport kits.

MAD Sportive sport kits combine powerful lowering springs with precision sport shock absorbers in their unique sportkits. By combining the lowering springs and shock absorbers the Sportkits give the driver unparalleled control.

- 2 years or 100.000 km guarantee (shock absorber) lifetime guarantee (springs)
- maximum safety also at high speed
- lowering range 25-60 mm
- Shortened damper and piston for ultimate in comfort and performance

The highest standards

MAD Sportkits are produced to meet the highest standards in quality and excellence. All materials used are the best available and the springs even come with a lifetime warrantee. Our high quality products are TUV, ISO and RDW approved.

Looks & performance

What determines the ultimate in looks and performance of a car? What makes a ride truly yours? Well.....we say it's your unique idea of styling and adjustment.. Free yourself from factory presets and standard springs. Choose the freedom that Mad Maxx Coil Over suspension by MAD Sportive will offer you..

Mad Maxx Coil Over suspension is developed with state of the art technology using only the best of materials. The system includes high-quality metallic red springs, chrome polished struts, light alloy components, Elastomer bump stops with integrated dust protection system and (where possible) pre-load springs.

- 2 years or 100.000 km guarantee, lowering range 20-80 mm
- high-quality metallic red springs
- chrome polished struts light alloy components
- elastomer bump stops with integrated dust protection system
- zinc plated for ultimate protection

Freedom

The degree of lowering can be easily and quickly altered by adjusting the position of the spring collar on the specially designed exterior thread. Using the included adjustment tool, the height can be adjusted at any time on all four dampers. This gives you the freedom to alter the appearance and driving performance of your car ...any time....any place.

That's what MAD SPORTIVE calls Maxx freedom.

MAD Auxiliary Springs

To counter the negative effects of heavy loads, MAD has developed cleverly designed Auxiliary Springs and Cross Country Sets. Powerful additions to your suspension that you will not notice in every day use of your vehicle. A set of MAD Auxiliary Springs offers extra support to your existing springs. A Cross Country Set offers both extra support and extra ride-height (3 to 6 cm) to your vehicle.

Interactive Suspension

As versatile as they are reliable. MAD Interactive Suspension offers the ultimate in suspension control and possibilities. With MAD Interactive Suspension it is possible to adjust the amount of spring action and achieve the maximum comfort and result. The pressure inside the bellows can be adjusted from the dashboard using an optional on board compressor or simply at any garage forecourt. By controlling the spring action you can control the height of the vehicle. This can be very useful, for example to make a vehicle tilt when loading for easy access, or when necessary, to lower a van to gain access to an underground garage.

Replacement springs

When you think of Suspension, you think of MAD. Also for Replacement coil springs MAD can offer a complete program.

This gives a few unique advantages:

- Catalogue covers the market
- No copies, all technical specifications and support from our research department
- Chrome Silicium or Chrome Vanadium springs
- Cold winded for maximum preservation of original form
- Perfect surface and anti-corrosion treatment, phosphated and powder coated (epoxy)
- TÜV and ISO 9001 certified
- Data can be supplied ready for use in TecDoc
